

GAC Malaysia Anti Corrosion Solutions

High technology protection, no matter what the weather

Protect your goods at sea, on land or in the air with anti corrosion packaging solutions from GAC Malaysia.

Delivering your strategy.

Protecting your cargo

GAC Malaysia offers a unique solution to protect your valuable goods in transit by land, sea and air from the impact of adverse environmental conditions. The latest technology has gone into the development of our anti corrosion packaging film making it ideal for protecting aluminium, carbon steels, stainless steel, copper, brass, alloys, galvanized steel, silicon steel, silver and solder metals. And yes, it's environmentally-friendly too, as most of the materials used are recyclable.

Tried and tested

Our team of specialists has developed and tested our protective film to ensure that it can withstand intense weather

conditions, making sure expensive equipments and machineries arrive safely at destination without suffering rust, tarnish, stains, white rust and oxidation.

Ease of use

Traditionally, rust prevention involved time-consuming and intensive task of applying oils and desiccants, followed by degreasing and coating removal on arrival. GAC's anti corrosion packaging eliminates the need to coat and uncoat without compromising on quality.

Large or small, we cover it all

The film is available in a variety of sizes and can be customised to your requirements for use on all types

of packaging and equipment. We offer standard and customised bags, sheeting reinforced film, perforated sheeting, zip locking and auto bags, gusseted liners, bags-on-a-roll, stretch film, coil covers, shrink film and tubing to protect small and large parts. Antistatic (ESD), fire retardant (FR) and coextruded constructions are also available upon request.

Competitive rates

By drawing on our strong relations with major manufacturers, GAC can negotiate the most competitive rates for packing materials to give you the best value for money.
